Areas of Interaction	Approaches to Learning	<ul style="list-style-type: none"> Improve multiple literacy skills <ol style="list-style-type: none"> Digital Literacy – the ability to communicate with the growing community Global Literacy – the capacity to read, interpret, respond to messages from global perspective Technology Literacy – use of technology to improve learning, productivity, and performance Visual Literacy – communicate through visual image Information Literacy – ability to find, evaluate and synthesize information Practicing the important stages of the design cycle
	Community and Service	<ul style="list-style-type: none"> Students will share their personal experience/story as a member of the community to inspire others in actively resolving issues within communities.
Subjects	English	<ul style="list-style-type: none"> Students will use their knowledge in text interpretation and in drawing plot line of a given short story
	Bahasa Indonesia	<ul style="list-style-type: none"> Students will use their knowledge in text interpretation (Bahasa Indonesia Stories)

Introduction

- In order to build a strong sense of community people need to become active, involved and engaged citizens.
- When students create a movie or interactive slide show to tell their story, learning becomes personal. Students can improve their writing, show creativity, and have a voice.
- Digital storytelling can provide a meaningful reason for students to learn to digitalize media content by using scanners, digital still cameras, and video cameras. In addition you will gain skills in using microphones, digitizing audio and working with music and sound effects as you create the narration and soundtrack for your story.
- The question is, *“What product will I create and how can it inspire others in the community I live in?”*

Challenge

Use the “Design Cycle” to create a digital story using software that combines a variety of multimedia tools. Use your technology skills working on text, still images, audio, video, and web publishing.
